PROFESSIONAL SUMMARY

Backend-focused Computer Science undergraduate (2027) with hands-on experience building scalable REST APIs and backend services using Python, FastAPI, PostgreSQL, SQLAlchemy, Docker, and Git. Strong foundation in Data Structures and Algorithms, Object-Oriented Programming and DBMS. Interested in designing reliable, maintainable, and high-performance software systems through backend architecture, API development, database design, and performance testing.

EDUCATION

Rajiv Gandhi Proudlyogiki Vishwavidyalaya (RGPV)

Bachelor of Technology in Computer Science Engineering

CGPA: 8.55 / 10

Mandideep, Madhya Pradesh

Sep 2023 – May 2027

TECHNICAL SKILLS

Languages: Python, C++, SQL

Data Structures & Algorithms: Arrays, Strings, Hashing, Linked Lists, Time Complexity Analysis

Backend Development: FastAPI, RESTful APIs, API Design, CRUD Operations, JWT Authentication

Databases: PostgreSQL, SQLAlchemy ORM, Relational Database Design, SQL Queries, Indexing, Connection Pooling

Software Engineering & Tools: Docker, Docker Compose, Git, GitHub, Postman, JSON, Environment Configuration

Testing & Performance: Pytest, Locust, API Testing, Load Testing, Performance Analysis, Error Handling

Computer Science Fundamentals: Object-Oriented Programming, DBMS, Operating Systems, Computer Networks

AI Integration: OpenAI API, Groq API (LLaMA), Gemini API, Third-party API Integration

PROJECTS

Scalable URL Shortener Service *Python, FastAPI, PostgreSQL, Docker, Locust*

GitHub | 2026

- Developed asynchronous URL shortening REST API using FastAPI, PostgreSQL, and SQLAlchemy.
- Implemented Base62 short-code generation, URL expiration, request validation, and modular routing.
- Designed relational database models using SQLAlchemy ORM for asynchronous PostgreSQL operations.
- Load-tested backend with 15,000+ requests using Locust achieving 135.17 RPS reliably consistently.
- Identified database connection-pool bottlenecks causing 7.5-second P99 latency under concurrent traffic.

AI Study Notes API *Python, FastAPI, PostgreSQL, Docker, Groq API*

GitHub | 2026

- Built RESTful CRUD backend service using FastAPI and SQLAlchemy ORM with PostgreSQL persistence.
- Designed normalized PostgreSQL schemas with SQLAlchemy ORM for relational data retrieval operations.
- Integrated Groq LLaMA API for automated note summaries with a modular backend architecture design.
- Implemented request validation, response models, and automatic API documentation using FastAPI framework.
- Containerized backend using Docker and Docker Compose for reproducible deployment environments locally.

ACHIEVEMENTS

Selected for Smart IDEA Hackathon 2025 for proposing an AI-based software solution.

Solved 220+ programming problems across LeetCode and HackerRank, strengthening problem-solving skills and algorithmic thinking.

LEADERSHIP & EXTRACURRICULAR

Student Organizer

Event Coordination & Leadership

Bansal College of Engineering

2023 – Present

- Coordinated technical and cultural events involving 1,000+ students by planning logistics, scheduling volunteers, and managing event execution.
- Anchored major college events, strengthening communication, public speaking, and stakeholder coordination skills.
- Collaborated with organizing teams to manage operations for the Bansal Pankh Marathon involving 300+ participants.
